Written as a first-person narrative in which “I” is all of humanity, *I, Humanity* explores human understandings of the universe. Jeffrey Bennett brilliantly condenses scientific discoveries throughout the ages into a brief history and presents the information in a manner that is clear, informative, and visually appealing. Written for children ages 7 and up, the book includes a helpful glossary, as well as suggested activities for further learning in specific age groups. It is a must read for those interested in the science of the universe.
